OBJECTIVE

Motivated and detail-oriented Computer Science student with a strong foundation in Python, SQL, Data Structures, Web Development, Machine Learning, and Cybersecurity. Seeking an entry-level Software Developer position to apply my technical skills in developing scalable and efficient software solutions, solving real-world problems, and continuously learning new technologies while contributing to organizational success.

PROJECTS

- **Quantum-Enhanced Smart Routing System with Predictive Traffic Analysis and Multi-Route Optimization**
 - Developed a Quantum-Enhanced Smart Routing System using Python, Flask, Scikit-learn, NetworkX, Qiskit, OpenRouteService, and TomTom APIs to perform predictive traffic analysis and optimize multi-route recommendations. Implemented quantum-inspired routing techniques, graph algorithms, and machine learning models to recommend optimal routes and improve routing efficiency.
- **Deep Learning Based Image Enhancement by Noise Suppression**
 - This project is designed to improve the quality of images by suppressing noise using deep learning techniques. By utilizing advanced neural network architectures, the system effectively removes unwanted noise from images, resulting in clearer and more visually appealing output.
- **Online Blood Management System**
 - Developed a web-based platform to manage blood donation processes and help users locate nearby blood donation centers. The system allows users to search blood availability and donor information efficiently. For this project, HTML, CSS, JavaScript for the webpage and SQL database is used for the Database.

INTERNSHIPS

ARTIFICIAL INTELLIGENCE AND GENERATIVE AI - YBI FOUNDATION

- Applied concepts of Artificial Intelligence and Machine Learning to build and analyze basic predictive models.
- Utilized Python and machine learning libraries for data preprocessing and analysis.
- Explored Generative AI tools and applied prompt engineering techniques for real-world AI applications.

CYBER SECURITY INTERN - TEXIAL CYBER SECURITY

- Performed vulnerability assessment and network scanning using tools such as Nmap.
- Used the Metasploit Framework to demonstrate security vulnerabilities on Android and Windows platforms.
- Identified potential web security issues including SQL Injection vulnerabilities.

SKILLS

- **Languages:** Python, JavaScript, SQL
- **Web:** HTML, CSS, Bootstrap, REST APIs
- **Tools:** Nmap, Kali Linux, Burp Suite, Wireshark, Wappalizer
- **Core:** Data Structures, Operating Systems
- **Security Concepts:** Vulnerability Assessment, Web Application Security

MANAGEMENT SKILLS

- Teamwork
- Communication
- Problem Solving
- Self-Motivation
- Continuous Learning
- Adaptability

CERTIFICATIONS

- Structured Query Language (SQL) Certification – Coursera
- Python Fundamentals for Beginners – Great Learning
- Certified Ethical Hacker (CEH) – EC Council
- Texial Information Security Auditor Certification – Texial
- Affective Computing – NPTEL
- Ethical Hacking Essentials – EC Council

EDUCATION

Sri Venkateswara University

M.Tech, Computer Science and Engineering (2024–2026), CGPA: 7.96

Sree Vidyannikethan Engineering College

B.Tech, Computer Science and Systems Engineering (2019–2023), Percentage : 71.26%

Narayana Junior College

Intermediate – CGPA : 8.59

Sri Chaitanya Children's Academy

SSC – CGPA : 9.2

ADDITIONAL INFORMATION

Languages: English, Telugu

Hobbies: Badminton, Bug Hunting, Listening to Music
